

Challenge Name: FileNOM - 100 (FORENSICS)

TL;DR

The flag was hidden visually inside the spectrogram of the provided audio file. By opening `BSO.wav` in **Sonic Visualiser** and enabling a spectrogram layer, the flag became clearly visible.

Flag: `SPL{991253426721BSN76}`

The Setup

Two audio files were provided: `BSN.wav` and `BSO.wav`. Plain playback produced no obvious result — the challenge hint warned that simple playback wouldn't help, so I inspected the files visually using a spectrogram.

Tools used:

- Sonic Visualiser (GUI) — primary tool to view spectrograms
(Alternatives: Audacity, ffmpeg showspectrumpic, spectrogram-cli)

When I analysed the **BSO.wav** file and use “Add Spectrogram”.

Flag captured.

Final

This was a classic “visual stego in audio” challenge — nothing audible to the ear, but clear in the frequency domain. You already found the flag in the spectrogram; paste it into the TL;DR and the Flag line before publishing.

Flag: `SPL{991253426721BSN76}`
