

Challenge Name: SwArmy - 50 (CRYPTO)

The challenge gives a sequence of Swedish number words and names, and asks you to decode the hidden flag.

Step 1: Analyze the Input

The input contains two types of tokens:

1. Swedish numbers

- Nolla = 0
- Ett = 1
- Tvåa = 2
- Trea = 3
- Fyra = 4
- Femma = 5
- Sexa = 6
- Sju = 7
- Åtta = 8
- Nia = 9

2. Names/Keywords

- Adam → A
- Bertil → B
- Caesar → C
- David → D
- Erik → E
- Filip → F

Observation: Each token corresponds to a **hex digit or letter**. The word `Caesar` is actually the **letter C** in this challenge.

Step 2: Convert Swedish Numbers

Replace the Swedish numbers with digits. For example:

Sexa Treä Nolla → 6 3 0
Två → 2
Fem → 5

Step 3: Convert Names to Letters

Map the names to their letters:

Adam → A
Bertil → B
Caesar → C
David → D
Erik → E
Filip → F

Step 4: Combine Digits and Letters

Concatenate the converted digits and letters in the order they appear. Example:

Sexa Treä Nolla Caesar → 630C
Två Filip Ett Caesar → 2F1C

Repeat this for the entire sequence.

Step 5: Form the Final Flag

The concatenated sequence forms a **hex string**, which is wrapped in the flag format:

```
SPL{630C2F1C0EE1B8D7DA57CF8936AE7E78274ABA0BFD765FE10A20DFE580F9EECC}
```

Final Flag:

```
SPL{630C2F1C0EE1B8D7DA57CF8936AE7E78274ABA0BFD765FE10A20DFE580F9EECC}
```

Conclusion

This challenge was a **multi-layered substitution problem**, combining number-to-digit translation and name-to-letter mapping. Recognizing that “Caesar” represents C was the key insight.
